Calorie ratings are
important when selecting
Flame-Resistant garments.

Flame Resistant

- Designed to cover all exposed areas as much as reasonably possible
- Designed to minimally interfere with work activities
- Must be easily removable
- Non-FR logos must be limited in size and space

Enhances the chances of survival in the event of an arc flash - ASTM F1959 defines how long until the wearer gets no more than second degree burns.

Flame-Retardant Treated and Self-Extinguishing

- Treated to reduce flame char length and to self-extinguish flames in a quick manner
- Treatment effectiveness may be reduced, and even diminish with washing and wear
- FR-treated clothing may reignite after extinguishing due to heat retention
- May be effective for small-scale fire hazards
- May still melt or drip in most fire situations

May lessen injuries by reducing the amount of time that clothing burns.
